Implementa welcomes new sales agent for magnetism products in China

Implementa Hebe AB (publ) has appointed a sales agent – Heyday International Co., Limited - for its product the MFG-1000 on the Chinese market. MFG-1000 is a magnetic field generating equipment instrument intended for e.g. cancer research. Scientists in South Korea have with similar equipment showed that when cancer cells from mice with attached nano particles of metal oxide is exposed by a strong alternating magnetic field, the particles get so hot that the cancer cells are killed and the tumor is degraded. The magnetic field does not harm the mouse (Forskning och Framsteg, 7/2011).

CoolHeater

Implementa Hebe AB develops innovative products for laboratories. The products are intended for customers within the BioTech and LifeScience areas. Implementa Hebe AB also works with business development of scientific projects and consulting within corporate governance and business development.
